WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Make two, 2,318 mm long on the centre line (2,324 overall).
Cut each end 7 degrees off square, the two cuts parallel (the tube is a long parallelogram seen from the side): fitted, both ends stand upright against the long beams' inner faces.
Inboard face: one 11 mm rivet nut hole 25 mm from each end, 20 mm (front end) and 25 mm (rear end) below the top face; one more 1,673 mm from the front end, 25 mm below the top (bearer).
Fit: between the long beams, ends against their inner faces, tops of end beams and purlins level; one cleat at each end.
Check: laid between two straight edges 2,300 mm apart, both end faces touch them fully.
