WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Order made to size: 3,000 mm wide (along the curb) by 2,419 mm (down the slope), with a 1,020 x 670 mm notch at the middle of the rear edge for the solar panel.

Reinforced hem all round, including the notch; brass or stainless eyelets about every 300 mm and at every corner.

Fit: over the frame; lace each eyelet round the beam below it with cord. The notch's sides lace round the purlins, its front edge round the panel bearer; the panel covers the notch.

Fit only when forecast gusts are below 15 m/s; take it off before storms (15 minutes or less by unlacing).

Check: laid on the frame, the hem reaches every edge and the notch clears the L-feet and rails.

COOLSHADE
